Sunnyvale, CA 94085 | harshitajogi2001@gmail.com | [LinkedIn](#) | [GitHub](#)

EDUCATION

Northeastern University

Boston, MA | September 2025 – May 2027

Master of Science in Computer Science, *GPA: 3.9/4.0*

Coursework: Algorithms, Artificial Intelligence, Database Management, Object-Oriented Design, Distributed Systems

Awards: **Academic Excellence Scholarship, International Impact Award**

University of Mumbai

Mumbai, India | August 2020 – May 2024

Bachelor of Engineering in Electronics Engineering, *GPA: 9.04/10*

Coursework: Data Structures, Operating Systems, Computer Networking, Machine Learning, Cloud Computing

TECHNICAL SKILLS

Languages

Python, Java, C++, TypeScript, JavaScript, SQL

AI & Data

LLM Agents, Prompt Engineering, LLM Evaluation, NER, PyTorch, TensorFlow, PySpark, BigQuery

Frameworks & Cloud

Spring Boot, React, Next.js, GCP, AWS, Azure, Docker, Kubernetes, CI/CD, Git

WORK EXPERIENCE

Nokia | Software Engineer Co-op, Test Automation & AI Tooling

Sunnyvale, CA | May 2026 – Present

- Extended a 50K+ line Python test framework, porting routing protocol test suites to a new router platform on live hardware.
- Built an LLM agent to automate test porting, grounded via internal-doc tool calls and a failure checklist mined from past debugging.
- Redesigned the agent into staged, dependency-ordered runs after live evaluation, adding false-pass checks and human review gates.

Network Science Institute, Northeastern University | Research Assistant

Boston, MA | July 2025 – July 2026

NIH-funded BioToolKB project

- Created a Python pipeline that uses GPT-4.1 to annotate 1M+ biomedical research papers, replacing manual tagging.
- Raised extraction accuracy from 60% to 98% via prompt iteration driven by false-positive/negative analysis against ground truth.
- Fine-tuned SciBERT for biomedical named entity recognition (NER), reaching 97% F1 on research-tool entities.

Morgan Stanley Capital International (MSCI) | Technology Analyst

Mumbai, India | January 2024 – August 2025

- Migrated 15+ APIs from Azure to GCP via Kubernetes and Docker, cutting latency by 23% and infrastructure costs by 40%.
- Engineered Spring Boot REST APIs for client-facing services, achieving 82% test coverage via JUnit and Gatling.
- Developed Databricks ETL pipelines using PySpark and Pandas, moving 5TB of data from OracleDB to BigQuery.

PROJECTS

Bitgig | Berkeley x DeepMind Hackathon | [Live Demo](#)

September 2026

- Architected a human-in-the-loop video data pipeline on Cloud Run and Cloud Storage, keeping datasets in-network with Gemini.
- Integrated the Gemini API to pre-segment lab and medical video into SOP steps, so experts correct drafts, not raw footage.
- Shipped the review interface in Next.js, React, and TypeScript on Vercel, from video and SOP upload to verified labels.

Autonomous Drone-Based Precision Agriculture System | Research Lead

July 2023 – December 2023

IEEE AEES DSTEI funded research, \$25,000 grant

- Designed a TensorFlow pipeline using NDVI for region-of-interest detection, enabling accurate geospatial crop mapping.
- Deployed a quantized CNN on an NVIDIA Jetson-mounted drone, achieving real-time leaf classification at 15m altitude.
- Published 2 IEEE SPACE papers ([Paper 1](#), [Paper 2](#)) and filed a patent on automated crop health monitoring.

AWARDS

- Harvard Hack-o-Ween Winner**, 2nd place and \$3,600 for TryBud, a blockchain job-verification platform (October 2025).
- Kovida Degree in Bharatanatyam** from Nalanda Dance Research Center, Mumbai (Indian classical dance).
- Trinity College London** Communication Skills, Grade 5 with Distinction.
